Set-FX™

Your Epson FX printer is a powerful machine. But because it is difficult to master, most people never get to take advantage of all its features.

Set-FX software makes it all seem easy. Just touch a key and you're an instant expert with your FX printer. Just look at what you'll be able to do:

Print the "missing" IBM characters.
Ever do a PrtSc "screen dump"? Did you see a lot of funny looking characters where your straight lines should have been? With Set-FX, you can print not only the line drawing graphics, but foreign characters, math and science symbols, and more.

Set any combination of print modes.
Have a large spreadsheet you'd like to fit on one page? How about printing posters or correspondence-quality letters? How about setting your margins? With Set-FX you have a choice of modes: condensed, enlarged, emphasized, proportional and more. You can even use combinations of these modes too, to give you over 50 different typestyles from which to choose. And, you can set your margins where you want them.

Create your own custom fonts.
Need to print more graphics characters for customized forms or signs? How about printing your company's logo? With Set-FX you can modify the IBM-style font provided or even create entirely new custom fonts. Great for special technical writing and foreign languages.

Explore your Epson FX with our FX-Ideas program.
Want to see even more ideas? Run our FX-Ideas program to see some great examples of new applications and techniques for your Epson FX. You even get some unique new fonts with the package. You'll be surprised what your FX can do!

To help you get started, Set-FX comes with a concise instruction manual to teach you more about your FX, and a Quick Reference Card with a complete summary of Epson FX control codes.

Best of all, Set-FX is fast. No slow graphics printing here! Set-FX prints in full-speed text mode.

Set-FX works with any IBM PC, PCjr, COMPAQ, Columbia, Eagle, or other IBM PC compatible, with either the Epson FX 80 or the Epson FX 100. It loads directly onto your DOS 1.1, 2.0, or 2.1 disks. Requires 64K (96K under DOS 2.0 or 2.1) and 1 disk drive. Compatible with most IBM software.
